

**ZZJG VALVE**

## Double Offset Butterfly Valve

**TOTAL SOLUTIONS FOR FLOW SYSTEM**

# ABOUT US

**ZHENGZHOU JINGGONG VALVE CO., LTD** is located in "Hometown of Valve in China" Gaoshan Town, Xinyang City, Henan Province. It is a high-tech enterprise in one line of design, manufacturing, sales and services.

Founded in 1981, after more than 40 years of development, it has become a professional valve manufacturer. With 103,180,000 RMB of registered capital, it covers an area of 26,000 m<sup>2</sup> and owns professional workshops.

**Aim:** loyal to and customer, optimal management, rigorous and pragmatic and to promote China's valve industry to a higher level and ZZJG brand a leading position.

**Certifications:** ISO9001 Quality System Certification, ISO14001 Environment System Certification, ISO45001 Occupational Health and Safety Management Certification, TS Special Equipment License, European Union CE Certification, etc.

**Main products:** PN0.25-32MPa, DN50-3000, soft/metal seal butterfly valves, plug valves, ball valves, gate valves, globe valves, check valves, control valves, etc.

**Application:** Water engineering, Electric power, Petroleum, Chemical industry, Petrochemical industry, Heating, Pharmaceuticals, Metallurgy, etc.

# ZZJG CASES

The company strictly controls and checks the quality of every link and process. Product design has been incorporated into a set of extremely rigorous and precise procedures; from design, material selection, manufacturing, assembly to operation, every link must undergo rigorous testing procedures, strict control, and high quality, so that customers can use it. At the same time, we deeply feel our rigorous and pragmatic quality purpose.

# Double Offset Butterfly Valve

## Overview

Double Offset Butterfly Valve's main structure is similar to butterfly valve, with the characteristics of short structure and small size of butterfly valve, so it can manufacture large-caliber, extra-large caliber and super-large caliber valves;

The valve combines the functions and benefits of butterfly valves, half ball valves, gate valves and globe valves, and has its own completely different powerful functions and benefits.

The valve combines the functions and benefits of butterfly valves, half ball valves, gate valves and globe valves, and has its own completely different powerful functions and benefits.

## Features

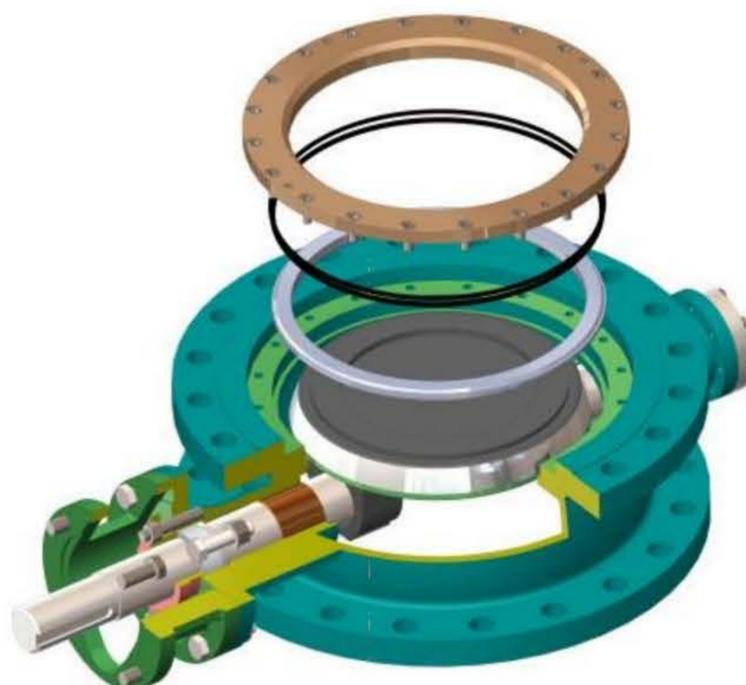

It can not only be reliably shut down in the forward pressure, but also reliably shut down in the reverse pressure or the reverse pressure is much greater than the forward

On the two sealing surfaces of the sealing pair, advanced processes such as overlay welding, ether laser sputtering, vacuum protection seepage overlay welding and other advanced processes can be used to form gradient functional materials such as martensitic stainless steel, austenitic stainless steel, cemented carbide, cermet, synthetic diamond and so on according to different hardness request

It can automatically align the center, and can automatically cross the range to compensate for wear;

Make full use of the energy of the medium in the valve when closing, and automatically apply extremely high sealing specific pressure, so that the high hard sealing pair can achieve reliable zero leakage.

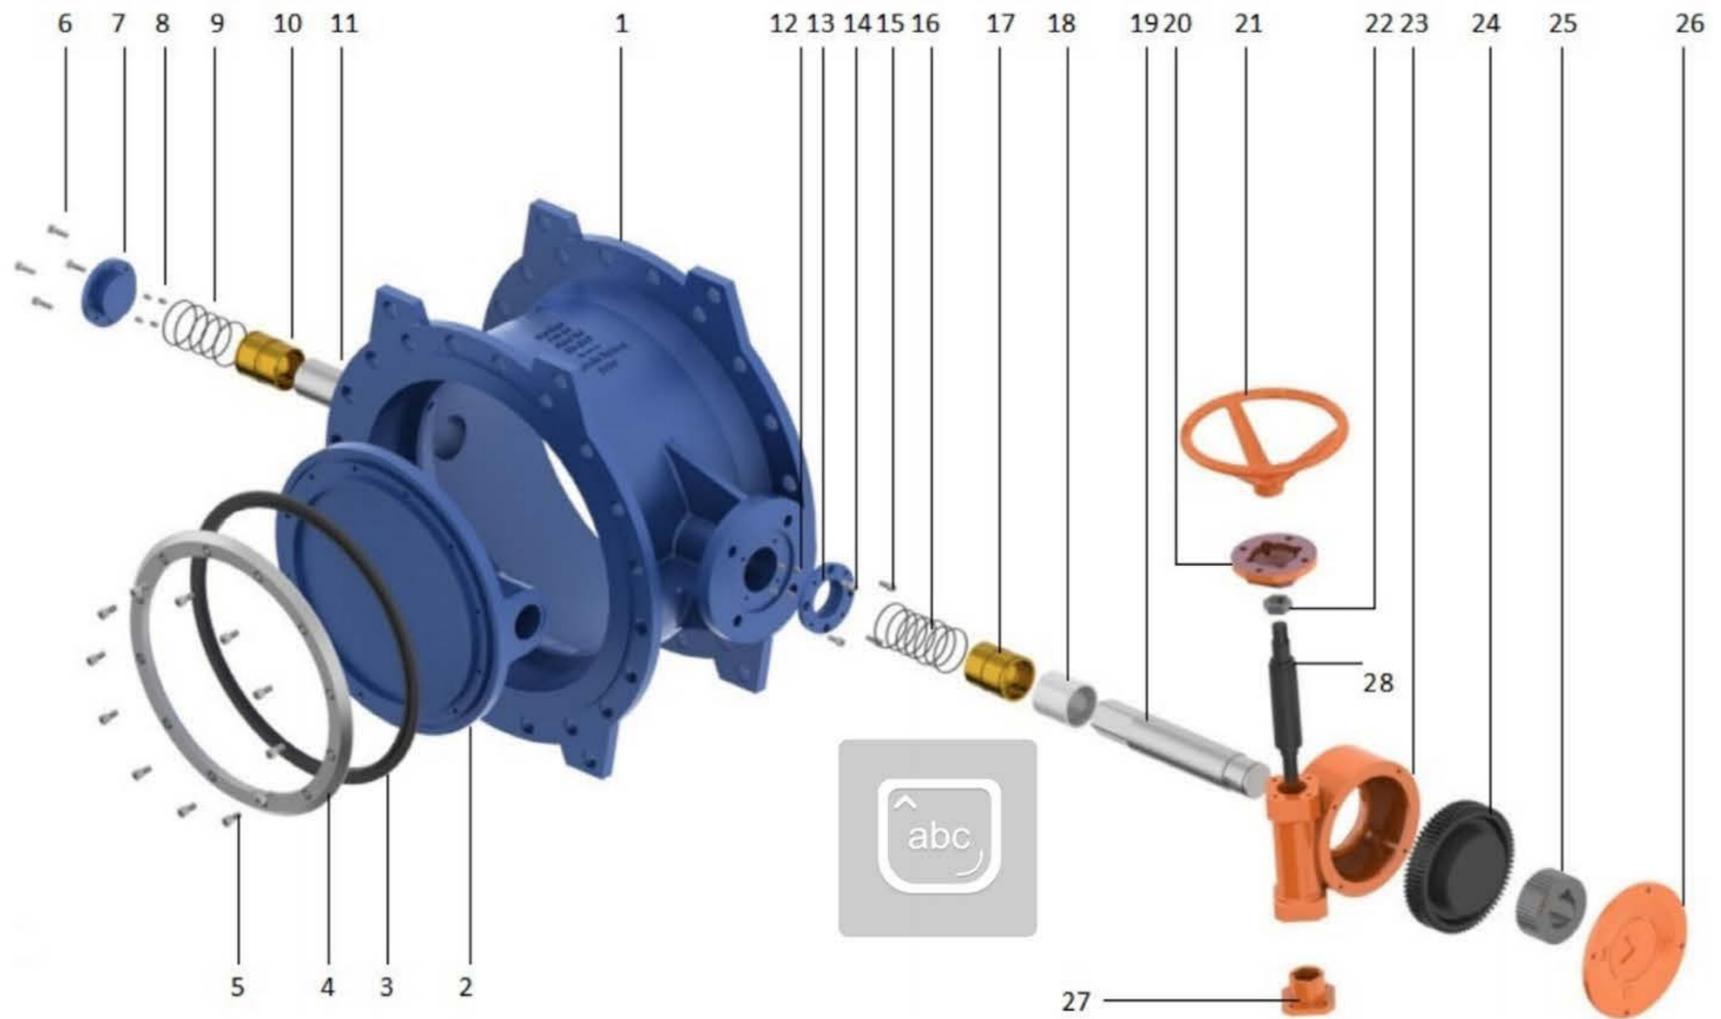

Instant closing, instant opening, no friction between the sealing pairs.

## Applications

It is widely used in metallurgy, mining, petrochemical, chemical, electric power, environmental protection, municipal and other industries and departments of pipeline opening and closing, regulation. Applicable medium: water, sewage, oil, etc.

No.	Part	No.	Part	No.	Part	No.	Part

## Technical Performance Specifications

Nominal diameter (mm)	Nominal pressure (Mpa)	Test pressure (MPa)		Applicable temperature	Applicable medium
		Shell test	Sealing test		
DN50~3000mm	0.6	0.9	0.66	0~80℃ 0~200℃	clean water sewage oil etc.
	1.0	1.5	1.1		
	1.6	2.4	1.76		
	2.5	3.75	2.76		
	4.0	6.0	4.4		

## Main Design & Manufacturing Standards

Standard content	Standard	Standard name
Flange standard	GB/T 9113	Integral steel pipe flanges (PN designated)
	GB/T 17241.6	Integral cast iron flanges (PN designated)
	HG/T 20592	Steel pipe flanges (PN designated)
	HG/T 20615	Steel pipe flanges (Class designated)
	HG/T 20623	Large diameter steel pipe flanges (Class designated)
	ASME B16.47	Large Diameter Steel Flanges NPS 26 Through NPS 60 Metric /Inch Standard
	ASME B16.5	Pipe Flanges and Flanged Fittings NPS 1/2 Through NPS 24 Metric/Inch Standard
Structure length standard	GB/T 12221	Metal valves - Face to face, end to end, center to face and center to end dimensions
	ISO 5752:1982	Metal valves for use in flanged pipe systems Face-to-face and center-to-face dimensions, MOD
	API 609	Butterfly Valves: Double-flanged, Lug and Wafer-type, and Butt-welding Ends
Pressure test standard	GB/T 13927	Industrial valves - Pressure testing
	ISO 5208:2015	Industrial valves - Pressure testing of metallic valves, MOD
	API 598	Valve Inspection and Testing
Structural design standard	GB/T 26146	General valve - Eccentric semi-ball valve
	GB/T 12238	General valves - Flange and wafer connection butterfly valves
Use material standard	GB/T 12226	General purpose industrial valves - Specification of flake graphite iron castings
	GB/T 12227	General purpose industrial valves - Specification of spheroidal graphite iron castings
	GB/T 12229	General purpose industrial valves - Specification of carbon steel castings
	GB/T 12230	General purpose industrial valves - Specification of stainless steel castings
	ASTM A351	Standard Specification for Castings, Austenitic, for Pressure-Containing Parts
	ASTM A216	Standard Specification for Steel Castings, Carbon, Suitable for Fusion Welding, for High-Temperature Service

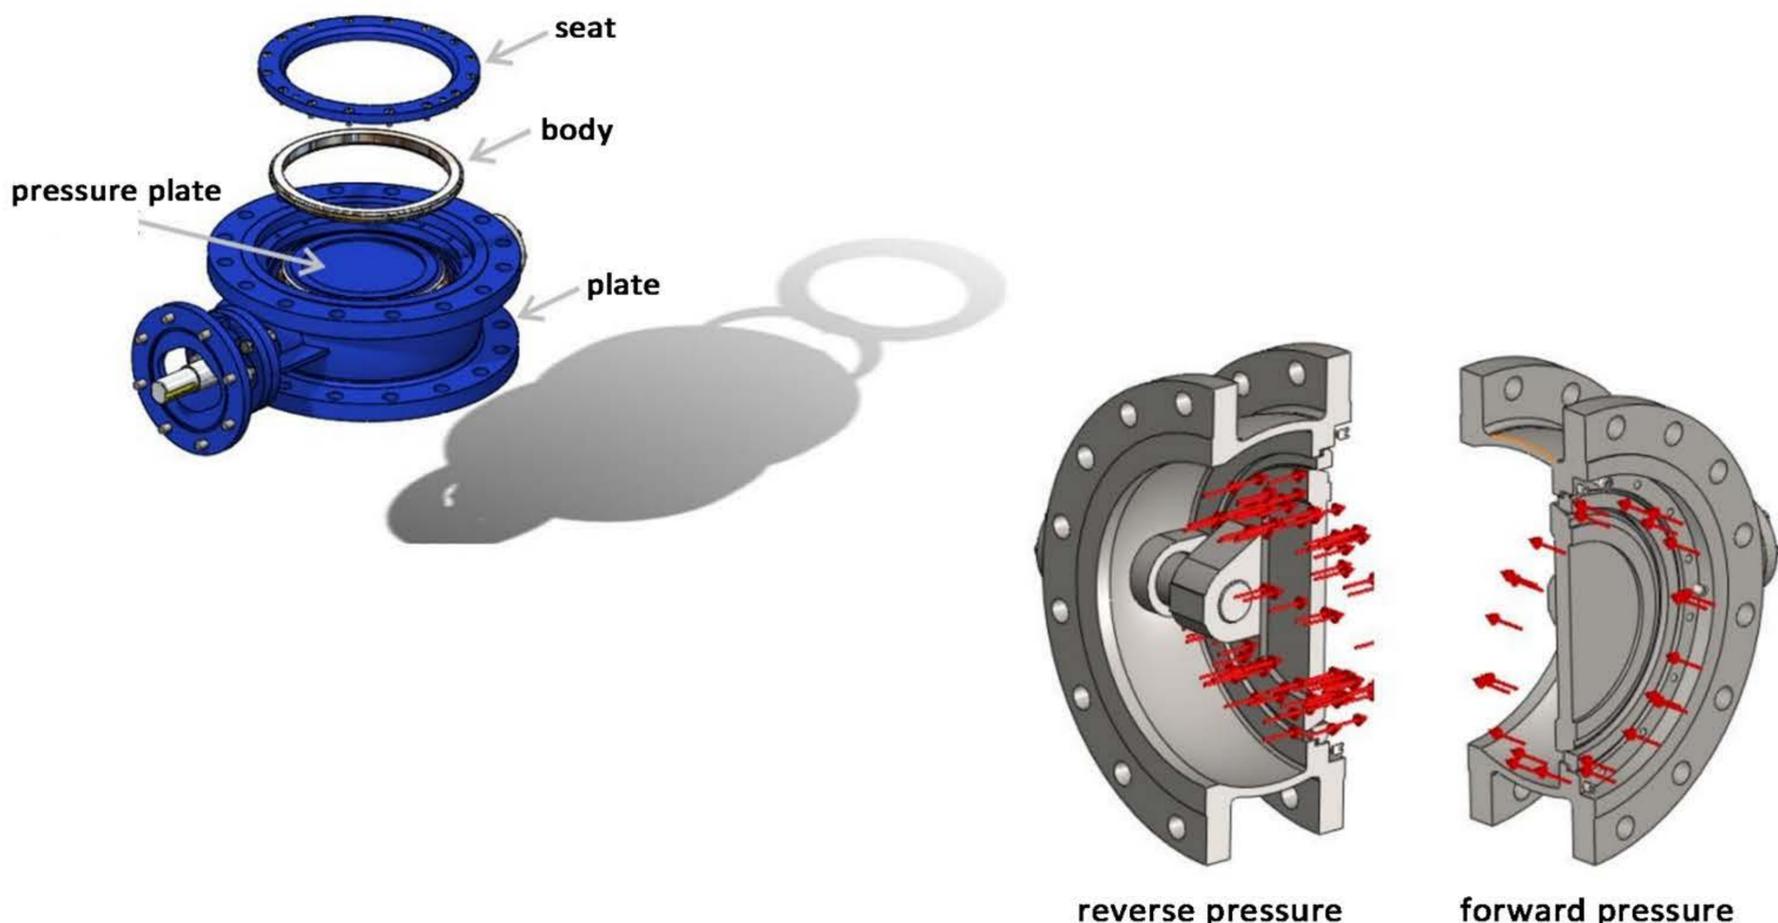

## Operation

Main types: The main types of this valve include manual, worm gear, electric, pneumatic, and hydraulic. Among them, pneumatic valves and hydraulic valves are suitable for pressure air and pressure liquid sources.

## Working Principle

The valve seat adopts the DBB (single piston effect) sealing principle, the sealing surface of the spool is a cubic curved surface, and the sealing surface of the valve seat is a primary conical surface. At the sealing point, the seat face is actually a slice of the cubic surface of the spool, so the combination is perfect.

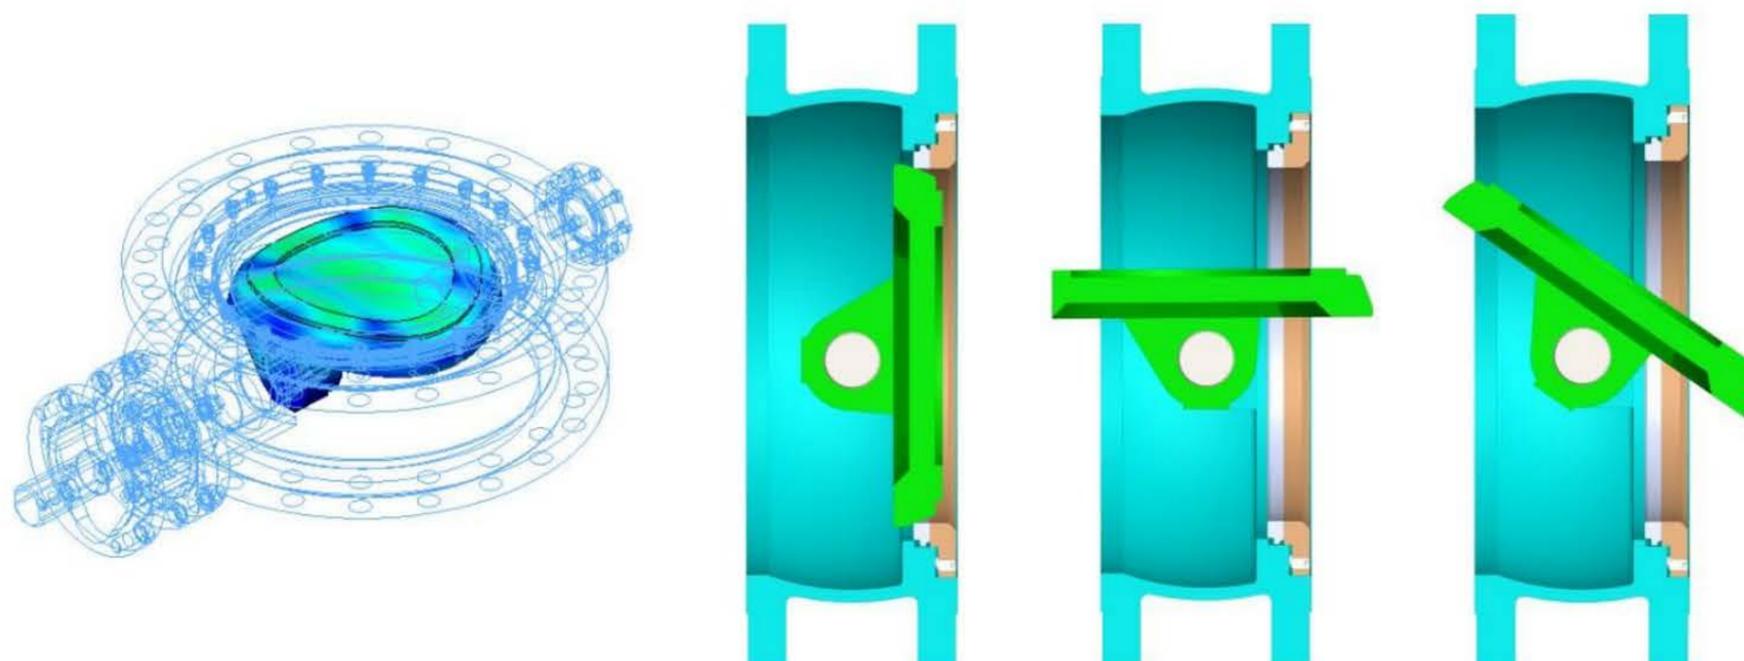

It has the function of adapting (automatic positioning and overlapping of the center) and compensating for wear, because the center of rotation deviates from the geometric center of the spool, there is the actual effect of the spool entity constantly retreating and shrinking inward when the spool is opened, and the spool entity continues to advance and expands outward when the spool is closed, and its function is equivalent to the synthesis of hemispherical valves, gate valves, globe valves, and butterfly valves.

The main function of the bidirectional flow valve is to seal well both at forward pressure and when reverse pressure or reverse pressure is greater than forward pressure.

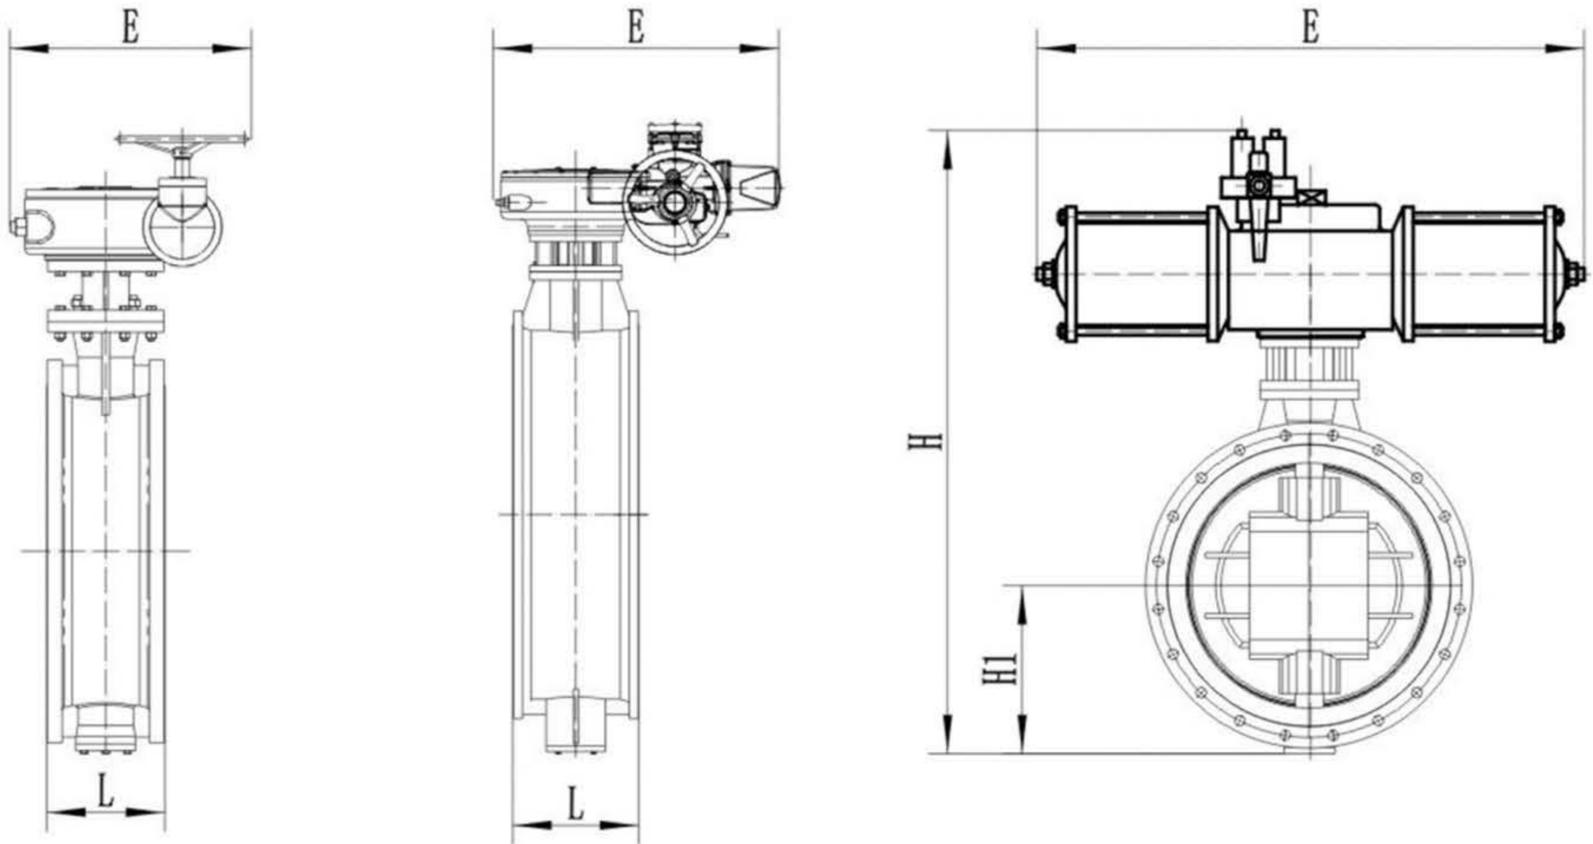

When the forward pressure acts, the medium pressure pushes the valve plate to move forward, the valve stem is deformed, and the sealing surface of the valve plate transmits pressure close to the sealing surface of the valve seat, and pushes the valve seat to the valve body step to make it dense and good.

When the reverse pressure acts, the medium pressure pushes the valve plate to move backwards, the valve stem is deformed, and the medium pressure simultaneously pushes the valve seat sealing surface to close to the valve plate sealing surface to transmit pressure, and pushes the valve seat to the valve plate deformation position

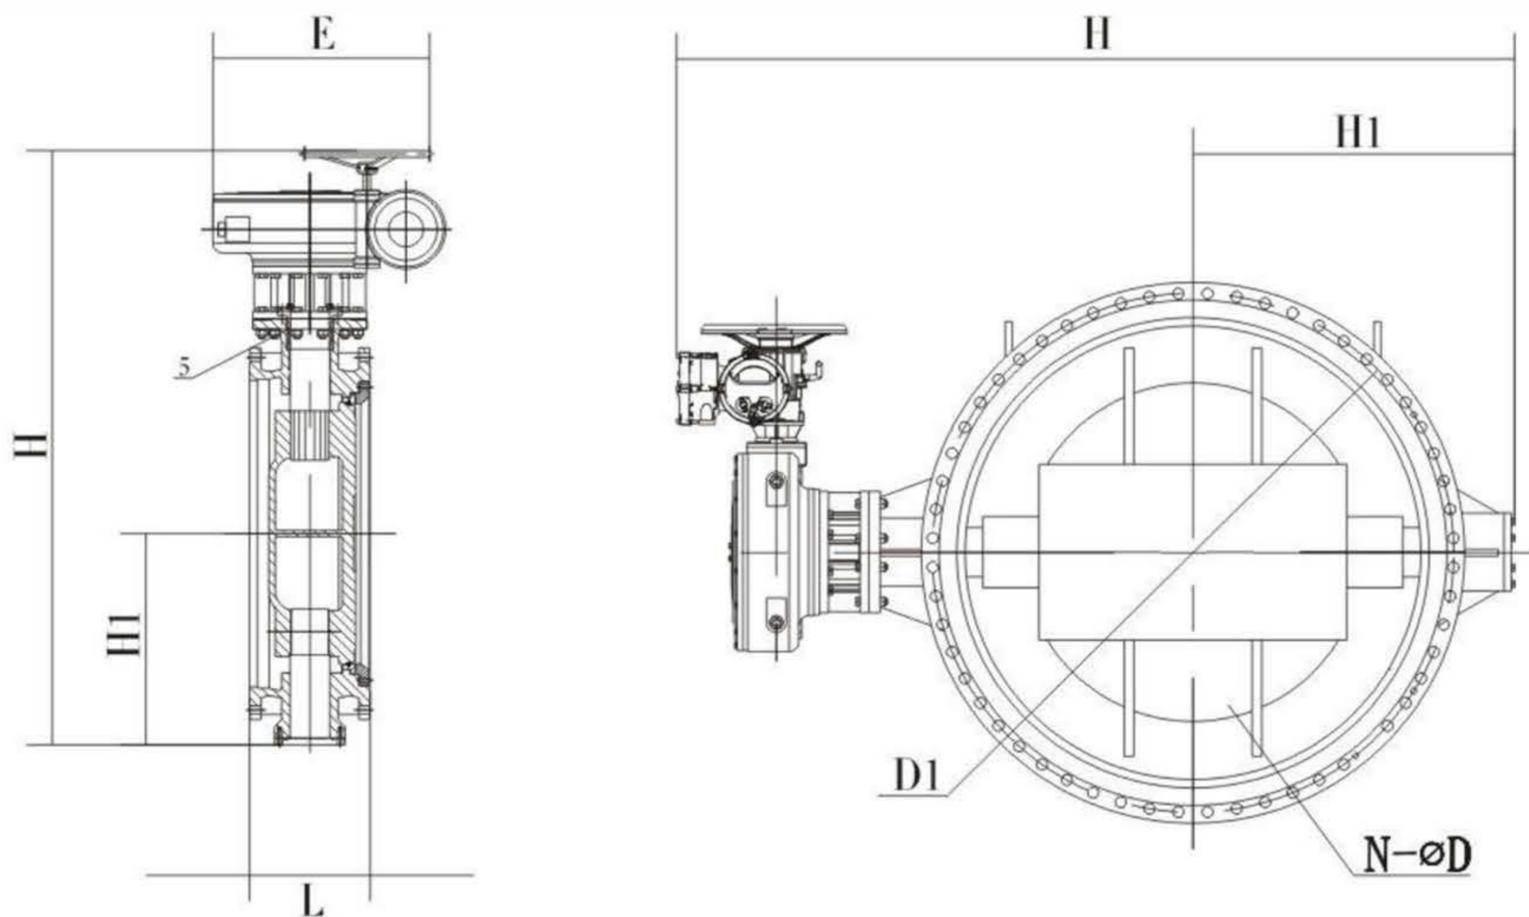

changes in different angles of valve opening
